

2007 Drug Formulary and Pharmacy Benefit Guidelines

The following is a listing by drug class of medications most commonly prescribed for SummaCare enrollees under the SummaCare Prescription Drug Benefit. SummaCare three tiered prescription drug benefits are generic-based. Prescription drug benefits vary, but in most cases, brand name medications that have a generic equivalent require the patient to pay a Tier 3 copay or the difference in cost between the brand and generic medication.

Members pay a **Tier 1** copay for most generic drugs and selected low cost brand name drugs. Members pay a **Tier 2** copay for higher cost generic drugs and formulary ("preferred") brand name drugs. Members pay a **Tier 3** copay for non-formulary and highest cost brand name drugs.

Key to Notations:
PA: Prior authorization is required for this medication. Please refer to the boxed section at the end of this document.

ST: A step therapy protocol is in place for this medication. Claims for this medication will be covered based on the enrollee's previous medication history. If prior medication history does not meet clinical guidelines, prior authorization will be required.

QL: Quantity limitations (maximum number of tablets/capsules, etc. per retail prescription) are in place for this medication. Please refer to the boxed section at the end of this document.

•: This medication is an injectable that is self-administered and may be obtained through our specialty pharmacy.
